

Rebuttal for Team 19

Bug #	Status	Reason if Invalid	Comments (for marking)
1	Valid		
2	Valid	Note: This is mostly Windows OS related. Can be fixed but our team isn't able to test the fix Test case not behaving in order to show the bug	
3	Valid		
4	Valid		
5	Invalid	The proposed output differs from what is expected from GNU's shell implement of wc	
6	Invalid	We stated in the assumptions addressing the invalid range.	
7	Invalid	The message displayed - no file specified - is due to the missing `-name` as without it the shell doesn't find the folder. Making it an invalid bug.	
8	Valid		
9	Invalid	We stated in the assumptions addressing the invalid range.	
10	Invalid	If the exact steps are carried out in a UNIX shell, it will also throw the same error that no such file or directory exists. And we get the same error: Cannot find './folder2'. No such file or directory.	
11	Valid		
12	Valid		
13	Invalid	No proper example show.	

		<p>Doing <code>mv . random-name</code> will give <code>.</code> is invalid argument in GNU and our system gives:</p> <p><code>mv: . -> random: Invalid argument</code></p> <p>Which is as expected</p>	
14	Invalid	<p>The error message is correct since when more than 1 source operand is being provided it has to be moved to somewhere and that destination must be a directory.</p> <p>UNIX gives a generic error so this bug is invalid</p>	
15	Invalid	<p>Error message presented with <code>-d</code> for removing a non-empty directory is the same as without <code>-d</code>. Could be improved but it is clearly not a bug, just a design choice.</p>	
16	Valid		
17	Valid		
18	Valid		
19	Invalid	<p>Assumptions specify that exit will always terminate with exit code 0 and ignore any arguments passed in</p>	
20	Valid		
21	??? Need to discuss this. Maybe they found a better way!		
22	Invalid	<p>Duplicate of #21. The bug is due to the same series of commands.</p>	
23	Invalid	<p>Our behavior is exactly like in bash</p> 	
25	Invalid	<p>Our behavior is exactly like in bash</p>	

		 	
26	Valid		
27	Valid		
28	Invalid	Duplicate of 20. Grep <FILENAME> - takes in <FILENAME> as a pattern and begins to wait for stdin.	
29	Valid		
30	Valid		
31	Invalid	Duplicate of #34	
32	Invalid	<p>As tested in UNIX:</p>  <p>Only the second “aaaa” will be replaced in line and only one exists. It isn’t cumulative as assumed in the bug report</p>	
33	Invalid	<p>If you try in UNIX it supports multiple and/or globbed files.</p> <p>It will just append the results. This is also mentioned in the assumption file.</p>	
34	Valid		
35	Invalid	<p>Doing echo > ls</p> <p>Creates an ls file which is empty. Hence doing * will invoke the app with the filename which is what happens in UNIX also:</p>	

			
36	Invalid	The program is waiting for stdin as expected from the specifications and it conforms to GNU's wc implementation
