Rebuttal for Team 6

Note:Based on rebuttal the status of the bugs accepted have been changed from Invalid to Valid hence file is bit different than the one submitted in Rebuttal phase submission

Bug #	Status	Reason if Invalid	Comments (for marking)
1	Valid	Argued why invalid in Fixes.pdf	
2	Valid	Note: Can be considered invalid since its OS related. But we plan to fix this in MS3	
3	Valid		
4	Valid		
5	Valid		
6	Invalid	For our paste command to support merging only lines from stdin, we chose to terminate it on reading an empty line. The usual would be to terminate on EOF but this would close stdin for the entire application and so we decided to terminate once an empty line is read. This is specified and explained in assumptions. 'paste - < file' is not expected to output the same as 'paste file'.	
7	Valid	Even when cp is called with the method cpFilesToFolder it does indeed check if the destination does not exist and in that case it assumes that the destination is a file, correctly creating it. We do not see any problem here and it is also unclear what the bug report refers to even after reading the specification again. If anything our implementation is more foolproof than required.	
Testcase included without bug mentioned in report	Valid
